

Newsletter Spain – April 2021

Due to the situation on the international market, prices are at a level that, in our opinion, is already very low, but that could possibly continue to fall slightly and that will certainly recover as soon as this situation definitely improves.

In view of this situation, you can now advance your volume requirements in order to secure yourself for deliveries until the beginning of the harvest in 2021 or even until the end of December 2021. As already said, it could be that the prices could possibly decrease slightly, but not very much, because we have seen that the prices that have been available since the beginning of the 2020/2021 campaign from October 2020 have hardly changed.

One speaks of a possible crisis distillation, which could be financed from European funds. After checking the information with most of the co-operatives we work with, that scenario seems far away today, but it is entirely possible. We have had generous rainfall in the fall, snow in the winter, and it depends on whether there will be night frosts in April / May or not. Under normal conditions, the 2021 harvest is unlikely to be below a normal harvest and considering the stocks that have accumulated in Spain, distillation would be the only way to keep the current price equilibrium stable.

INDICATIVE WINE PRICES – FOR DIFFERENT PRODUCTION COUNTRIES

The best prices for wine, which you are looking for, depend from several parameters, like f.e.

- Profile of the quality and taste of the wine
- Necessary treatments to the wine (raw wine, centrifuged, filtered, stabilized, etc.)
- The total quantity that you need
- And, most important, the time of delivery which will be fixed in every contract.

All these parameters are active assets in the negotiation which help us to get the best ratings for you.

Don't hesitate to contact us for your demand, so that we can search for wines at the best market conditions for you. We are anytime at your full disposal.
